Digital Equipment Corporation sues Intel Corporation for violating microprocessor architecture patents

... Lawsuit maintains Intel infringed Digital patented technology to enhance performance of Pentium, Pentium Pro and Pentium II microprocessors ...

Digital Equipment Corporation has filed a lawsuit in U.S. District Court, District of Massachusetts, here charging Intel Corporation with willful infringement of 10 Digital patents in making, using and selling microprocessor products, including its Pentium, Pentium Pro and Pentium II microprocessor families.

Alleging that Intel's patent infringement has caused Digital economic injury and, if not stopped, would cause irreparable harm, the company seeks both an injunction and monetary damages, including triple damages for Intel's willful violation of the patents. The injunction would prohibit Intel from using Digital's patented technology in its present and future microprocessor products.
